fresh should be used.

Infertile eggs are superior to fertile eggs under ordinary summer temperature, fertile eggs are spoiled for food in twenty-four hours. An infertile egg under the same temperature will remain fit for food for six days. Fertile eggs may be used when it is known that they have not been subjected to heat.

Only those eggs having strong, sound shells should be used. An egg with a weak shell placed in the solution is liable to be broken and may ruin the entire lot of eggs by befouling the preservative. Cracked or poses.

it is known that they have not been subjected to heat.

Only those eggs having strong, sound shells should be used. An egg with a weak shell placed in the solution is liable to be broken and may ruin the entire lot of eggs by hefouling the preservative. Cracked or dented eggs may be detected by hitting one egg against another. If the ring is metalic the shell is not cracked or broken, but if deadened, close examination will reveal a crack or blind check. Such eggs will spoil the preservative.

Only clean and unwashed eggs

amination will reveal a crack or blind check. Such eggs will spoil the preservative.

Only clean and unwashed eggs should be used. Dirty eggs, it used, contaminate the preservative with harmful-bacteria, which may enter the egg and cause putrefaction to take place. Washing eggs intended for preserving removes from the shell the last coat of lime, or bloom, which aids materially in self-preservation. When removed by washing, the pores of the egg are left open and are more susceptible to entrance of harmful bacteria.

Sufficient solution should be allowed for evaporation. The uppermost eggs should be covered by two inches of preservative. The eggs may best be kept in a stone jar and in a cool place, such as the basement or cellar. When putting them downdrop them in as gathered. This is a better method than pouring the solution over the eggs. When desired for use, remove only those needed. A glass cover should be provided for the jar, to keep the solution clean and to minimize evaporation. A gummed label pasted on the glass is a convenient method for keeping record of dates and number of eggs.

It is a common practice to add salt to either of the above solutions. This its not a good practice and renders the solution less efficient, inasmuch as the brine enters the egg readily and liquefies the albumen.

"Chickers is chickens." but the best chickens are the ones that re-brine enters the egg readily and liquefies the albumen.

"Chickers is chickens." but the best chickens are the ones that re-brine enters the enters the

"Chickens is chickens." but the best chickens are the ones that receive the most intelligent care. While experience is doubtless the best teacher, it is also very expensive training. Why not use the experience of others and save money. Any amount of valuable information may be had free of charge.

It seems that some of our readers, who are raising poultry on a small scale, feel that it is too expensive to buy books and subscribe for good poultry magazines. In a way, they are quite right. A good poultry library would be expensive and it is quite unnecessary for the home poultryman. The very best and most reliable instruction on poultry production can be had free of charge. Among the sources of free instruction on poultry raising are the public library, the United States Department of Agriculture, Washington, D. C., and the poultry department of the State Agriculture washington, D. C., and the poultry department of the State Agriculture washington, D. C., and the poulture of the state Agriculture of the stat

A few minutes study each day on tried and proved methods will mean profit to any poultry raiser.

Facts for Poultry Raisers

Only eggs known to be absolutely slight deterioration will take place.

The following solutions have given

Canning Poultry.

With the price of fresh meat so high canned products are sure to become more popular. The home canning of meat, especially poultry, should be studied and practiced by every housewife.

Greater care must be used in the

ize it entirely.

ize it entirely.

Hints for Poultry Raisers.
Summer shade insures thrifty chicks.
Remove cockerels to a separate yard the last of May or the first of June.
Sour milk makes a valuable addition to any poultry ration.
Soft, fresh dirt is an insurance against leg weakness in chicks.
Before storing the incubator clean thoroughly, remove the lamp and throw away the wick.
Spoiled or decaying flesh, if eaten, will surely cause limber neck. Burn or bury the dead.
When range is limited spade up the runs or move the brood coop a short distance daily.
Do not keep unnecessary male birds. An extra hen eats no more and may lay eggs.

After the grass gets tough chicks can catch more bugs and worms and will grow better on loose soil.

Clean, fresh water lessens disease, Filthy drinking water is the source of much trouble, Clean the drinking pans frequently.

pans frequently.

Mites are sure to accumulate if the droppings are not removed every week and the roosts sprayed with kerosene emulsion or disinfectants. Broody hens should be removed to slat bottomed coops as soon as dis-covered. Leave them there until they

orget it. Watch for head lice on the chicks. Watch for head lice on the chicks. If found rub top of head with a small piece of lard free from salt.

Avoid crowding by keeping in small flocks and by providing roomy coops. Thin out if there are too

Eggs, \$1.50 per 100. E but better results are usually secured by feeding more green and vegetable feeds and a larger proportion of mash. The following ingredients should be mixed into a mash and fed wet—crumbly, not pasty. The feeding of milk to ducks in pans as a drink causes sore eyes. Use milk in the mash and feed only what will be readily cleahed up. Mix the proper amount for one teed only. Feld-over mash will sour and cause trouble if fed. The following proportions are by measure.

Water Glass Solution. A solution of nine quarts of water and one-quart of commercial water

Wheat Receipts Moderately Dullness of Day's Trading in

Heavy on Strong Market, Which Goes Up Sixteen Cents.

The receipts of wheat were moderately heavy today, but the market was strong and the demand excellent, and prices ad-vanced from \$6 to 16c above yesterday.

vanced from \$c\$ to 15c above yesterday's market.

The Gemand for the better grades of hard wheat was especially active and No. 2 hard wheat again reached the \$1.00 mark, there being about sixteen care of No. 2 hard respected sold at this price.

Some of the No. 2 hard samples, sloo trought \$1.00, but this grade sold generally aroung \$1.57 and \$1.98, while the No. 4 hard ranged in price from \$1.28 to \$1.27.

There was a pretty good inquiry for spring and mixed wheat, but as the offerings were rather light only a small number of sales were reported.

The demand for cog was moderately active, with prices quoted from \$2.0 to 4c higher.

The demand for copy was moderately active, with prices quoted from 2c to 4c higher.

White corn was again quoted at premium prices, the margin on white over the other grades, however, being a trible narrower than it was yesterday. Yellow corn ruled around \$1.52, while the better grades of white brought \$1.65 and the mixed ranged in price from \$1.62 to \$1.625.

The trade in cats was very dull until the last few minutes of trading, when the traders began to let go of their samples, and almost all of the offerings were disposed of before closing time. The market was firm and prices ruled from \$2 to let higher, with most of the samples, which graded No. 3 white, selling at 71c, while the No. 3 white.

The offerings of rys were extremely light, but the demand was good and the market remained firm.

Barley was quoted nominally steady, but the sales of this cereal were reported.

Clearances were: Wheat and flour equal to 140,000 bushels; cost, \$5,000 bushels; cost, \$1,400 bushels; cats, \$5,000 bushels.

Primary wheat receipts were \$24,000 bushels; cost, \$1,000 bushels; cost, \$1,400 bushels; cost, \$1,400 bushels; cats, \$1,400 bushels;

last year.

Primary oats receipts were 495,000 bu.
and shipments 1,197,000 bu., against receipts
of 139,000 bu. and shipments of 1,346,000 bu.
last year.

Wheat Market Is Heavy and July and Sep-

Wheat Market Is Heavy and July and September Are Lower.

Chicago. May 18.—Heaviness in wheat prices resulted today from reports that representatives of the European entonte nations had agreed to liquidate their options on American grain futures and to co-operate with the United States in a pooling system whereby exports from this country would be apportioned with due regard to domestic requirements.

Word that the rushing of wheat and barley shipments overland from the Pacific coast to be dispatched to Europe was being directed, by the federal government tended also to ease the market, especially as it was said Australian wheat would be brought in to the barley of the seed of the public of the week, a little linet of half a dozen brokers on one edge of the pit being all that, was left of the 100 or more who until of late formed the usual number. Opening wheat prices, which ranged from the same as yearterday's finish to 5 cents lower, with July at \$2.12 and September at \$42.05 were followed by changes that made the setback general, but less extreme, and thereby something of a recovery.

A sharp bulge in wheat values took place later. Strength of other grain appeared to be largely responsible, but in addition there was builtsh goesip current that Italian and French demand for wheat from Affertca was so large that a severe cut in the Italian allotment was necessary and the French total had also been reduced. The close was unsattled, 12c not higher, with July at \$2.16 and September at \$2.17. Corn. developed considerable strength owing to scarcily of sellers and to the fact that the seller of the seller

to a like advance, the market ross all around to well above yesterday's latest figures.

It was said current arrivals of corn were not sufficient to meet the industrial demand Upturas in prices continued unchecked until just before the end of the session. The close was nervous at gains of 35 4½ one.

In oats the large export sales of late acted as a stimulus to buyers. Besides northern lilinois and Indians were sending in complaints of dry weather.

Higher quotations on hogs lifted provisions. Perk led the advance.
