matton warranted was the cause of the decline.
On the better grades of sheep and lambs there has been a slump of about \$5.00 from the high time last week. Nothing was here yesterday of consequence, but had offerings been of any size there might have been a further brack, as Chicago was quoted as \$56,800 lower. Shorn western lambs, which at the high time touched \$17.00, are not quotable above \$18.00 ans might not bring that. California spring lambs that brought \$17.55 bere Thursday were matter of the open that sold at \$19.55. just a week before. Best native springers are stopping at \$18.00, as compared with a tap of \$55.00 at the high appl. And so on down the line. Medium to plain kinds are soff more than the best stuff, being as much as \$2.00 lower in some cases. Quotations on sheep and lambs: Lambs. Quoisitons on sheep and ismbs: Lamba-shorn, 11.536 [1.60] spring lamb, 21.60 [1.60] spring lamb, 21.60 [1.60] spring lamb, 21.60 [1.60] spring lamba spring lamb, 21.60 [1.60] spring lamba spring lamba shorn, 11.60 [1.15] sweep, aborn, 510.60 [1.75] swea, culls, chorn, 51.00 [1.75] swea, culls, chorn, 51.00 [1.75]

Grain Prices Move Up Over a

Nickel, While but One Car of Wheat is / Sold Here . Omaha, June 2, 1917.

Omaha, June 2, 1917.

Corn was the center of attraction in the cash market today and this ceresi was in excellent demand, with prices quoted from \$1/2\$ to \$1/4\$ to higher.

The whest market was much the same as it has been for the past several days, and while this article was somewhat higher today, the trade was extremely dull and traders would not arres on prices.

Whest receipts were moderately heavy and the receipts of corn showed a hig improvement, but while corn soid very readily on the advance, the bulk of the whest samples were held over, the demand for this cereal being very slow.

Up to a late hour there was reported sold only two cars of whest, a car, of No. 1 enjing, which brought \$1.26\$, and a saile of No. 3 mixed at the same price.

Clearances were: Whest and flour equal to 765,000 bushels.

Primary wheat receipts were 754,000 bushels against receipts of 1.084,000 bushels.

Primary corn receipts were 1,121,000 bush-a against receipts of 401,000 bushels last Primary outs receipts were 769,600 bush-

Attempts to Pick Up Small Amounts of Whest Send Price of Cereal Up 22e.

Chicago, June 2.—Extraordinary advances in the price of future deliveries of wheat resulted today from attempts to purchase small amounts on a market bare of offerings. The attempts was 32e a bushel, but quotational underwent a subsequent steep drop, and closed unsettled, with net gains of he to Se, at \$2.06 for July and \$1.91 for September. Cash wheat, that is wheat for immediate delivery, did not follow the advance in futures.

Corn finished 1½c to 4½c up, eats unchanged to %c higher and previsions varying from 1c decline to a rise of 20c.

It required actual buying of only 40,000 hushels to cause the Jump in the price of September wheat. Even smaller trading forced the rise in the July option. Almost the soils new buillah development in sight was the announcement that the government intends to protect growers in markeding their crops and that prices would be guaranted high enough to stimulate production. One crop estimate suggested that the yield in-North America this measen would rasch a total of fully a hillion bushels, but import needs of Great Jertian. France and

in North America this season would resen a total of fully a billion bushels, but import needs of Great British. France and Italy were put at 560,000 bushels.

One reason which made sellers wary of wheat was the strength of corn. Continued unfavorable weather formed the chief atimulus to buyers in the corn markef. Oats sympathised with the corn markef. Oats sympathised with the ascent of corn and wheat. Besides, export business of late had tempered beariab enthusiasm.

Forts and ribe were builishly influenced by the action of hogs and grain. Closing out of spreads between lards and ribe, however, had a depressing effect on lard. Cash prices: Wheat—No. 3 red, nominal: No. 7 red, \$2.69; No. 2 and No. 5 bard, nominal:

YORK STOCKS SIX LARGE CHINESE

Many Reasons for Irregularity and Heaviness of Trading in Wall Street Exchange.

New Tork, June 2.—Profit-taking occasioned by the usual week-end clouding of untainating contracts and next Tuesday's holiday probably accounted for the irregularity and heaviness of today's market. The abort interest also derived some encouragement from the further decline in Ruselan exchange to a point appreaching the minimum, and the decision of the Internals Commerce commission ordering a suspension of six months of schedules on domestic storage within the limits of New York harbor.

Unsettlement began with St. Paul issues and spread to Pacifics, coalers and trunk lines. Motors were another element of weakness. United States Sites fell 18., Noteworthy exceptions were provided by the so-called Maxican group, Mexican Petroleum scoring an extreme advance of spoints, other oils rising 1 to 2½ and American Simelting 2, with an average of a point for other coppers. Most of these gains were effaced in the heavy offerings of the last hour. Total saies amounted to 560,000 shares.

share.
This bond market was irregular, with total sales (par value) aggregating \$1.275,008.
United States and Panama bonds lost from 1, to 1 per cent on call during the week.

PROVINCES REVOLT

Threat is Made to Send Army to Peking to Force the Dissolution of Parliament.

Peking, June 2.—The provinces of Anhui, Chi-Li, Hu-Pe, Che-Kiang, Fo-Kien and Ho-Nan have proclaimed their independence and threaten to send a joint expedition to Peking to force the dissolution of Parliament and the reinstatement of Tuan-Chi-Jui as premier. Tang-Hau-Lung, speaker of the assembly, has resigned and gone to Tien-Tsin 100 join the military overnors.

The attitude of Chang-Hsun, the commander of the government troops at Nan-King, and Feng-Kwo-Chang, the vice president, is undefined, but it is believed that both are inclined to support the militarists. The president has issued a lengthy statement defending his dismissal of the premier, at the same time highly orasing him. at the same time highly praising him and expressing the hope that he may serve the country in the future. The

serve the country in the future. The statement ends:

"If those responsible for the present crisis intend to provoke internal war I will under no consideration watch the country sink into perdition. I am not afraid to die for the country."

The general tonc of the statement is apologetic and lacking in strength. Owing to the refusal of Li-Ching Hsi to accept the premiership, the president's position is precarious.

The six revolting provinces in China form the major part of the southeastern portion of the republic and have a population of about 120,000,000. The situation in China has grown steadily more threatening since President Li Yuan Hung dismissed Premier Tuan Chi Jui from office on May 23, following a riotous session of the House of Representatives, at which the deputies refused to pass a resolution declaring war on Germany. The Parliamentary building was surrounded by a mob demanding war and the president accused the premier of attempting to coerce Parliament. The military governors sided with the dismissed prime minister and left the capital in a body.

Only One Car of Wheat Sold on Omaha Market

On the Omaha market wheat was bigher, but just how much no one would say. Aside from a carload of spring wheat that sold for \$2.65, there were no sales. Bidding was up 2 to 3 cents. Receipts were thirty-four

carloads.
Corn was in good demand at \$1.571/@1.58 a bushel, \$51/@61/2 cents over the prices of Friday. The receipts were 118 carloads.
Outs sold \$4@\(\frac{1}{2}\) cents higher and at \$631/@64 cents a bushel. Receipts

were twenty-five carloads.

Gateway Club of Omaha University Elects Officers

At a meeting of the Gateway club, the official booster organization of the University of Omaha, Edward Elliot, junior, was elected editor-in-

chief for the coming season of the university publication, The Gateway. Miss Clara Lindley was elected assistant editor. Reed Zimmerman, business manager, and William Campen, assistant business manager.

The Dramatic club at its meeting, following the election of the Gateway club, selected Reed Zimmerman, president. Miss Rita Carpenter was elected president of the Gateway club.

SECRET STILLS IN MANY RUSS TOWNS

Consumption of Home-Made Vodka Working Havoc in the Rural Communities.

(Correspondence of The Associated Press.) Petrograd, April 24,-Prohibition of traffic in vodka which went into effect at the beginning of the war, while reducing to a minimum the percentage of drunkenness in cities throughout the empire, has met with less flattering results in the villages, according to reports recently received.

In these rural communities secret distilleries have sprung up and a "new scourge" has taken the place of the vodka of other days. This is especially true of Siberian villages, says Ryetch. A Siberian deputy is quoted to the effect that the peasants, instead of bringing corn to the towns to sell, are engaged in buying the small stocks remaining in such towns for sale to secret distilleries of vodka at

sale to secret distilleries of vodka at fancy prices, some times paying as high as 14 cents a pound.

"This communication," continues Ryetch, "is confirmed by the Siberian press. Nearly every village now has its bwn distillery. Consumption of this homemade product is increasing the number of hooligans in the villages and the latter are suffering in consequence. And this evil is not confined to Siberia. In the middle provinces the same conditions exist.

The Tambovsky Zemsky Vestnik says of these provinces: "Homemade vodka is consumed in enormous quan-

says of these provinces: "Homemade vodka is consumed in enormous quantities in spite of its high cost. The peasants have plenty of money and with few distractions in the villages, drinking is on the increase." The latter article concludes with the significant observation: "Perhaps those who are afraid of an educated peasant are secretly condoning this drunkenness."

Three Governors Will Address the Pedagogues Correspondence of The Associated Press.)

Flagg Young, formerly superintendent of Chicago's public schools and former president of the National Eduation association, will speak at the 1917 convention of the National Education association to be held here July 7-14. Mrs. Young was president of the association in 1910 and 1911. of the association in 1910 and 1911.

Efforts are being made by the association officials to have one or more cabinet members address the convention. Three northwest governors—James Withycombe, Oregon: Ernest Lister, Wasnington, and Moses Alexander, Idano, are on the program for addresses. Two other speakers will be Mrs. Mary C. C. Bradford, superintendent of public instruction of Colorado, and Bishop W. T. Sumner of the Epiziopal diocese of Oregon. The program of the convention will be centered around ideas of preparedness, nationalism and patriotism, according to D. W. Springer, Ann Arbor, Mich., secretary of the association.

SURFACE COMMAND WILL DEFEAT DIVER

Admiral Sims Says Navy that Can Control Top of Water Has the Submarine Beaten to Standstill.

The cabled news that American destroyers are now operating with the allied fleet and that Rear Admiral William S. Sims, U. S. N., is in command of this expeditionary force of horners, is welcome news to all who know the energy and skill of this officer and the effectiveness of the vessels which he commands.

After bringing about that extraordinary revision in our naval target The cabled news that American de

After bringing about that extraordinary revision in our naval target practice which changed the 3 per cent of hits scored at Santiago to the 3 per cent of misses which were later made on the target ranges, this officer was placed in command of our destroyer flotilla and later in command of our submarines. In the service he is, therefore, regarded as pre-eminently equipped for the work of, hunting down submarines with destroyers, as there is no one more familiar with the

there is no one more familiar with the capacities of both types. The views of Admiral Sims on the limitations of submarines must be of

The views of Admiral Sims on the limitations of submarines must be of intense interest at this time, when that type of vessel is absorbing so much attention and when he is now engaged in attacking them with American destroyers.

It was preceding the declaration of war that Admiral Sims was called to testify before the house naval committee. At that time he was commanding the new superdreadnought Nevada. He said to the committee: "Upon the invitation of clubs I have spoken before many audiences on the characteristics of the submarine, and I have found an almost complete misapprehension of what a submarine is and what it can do. They were not aware, for example, that a submarine can only steam for a short distance underneath the water, depending upon its size, from, say, forty to fifty or sixty miles, and that, having steamed that distance, it must come to the surface and stay three or four or five hours, according to the size, to rehours, according to the size, to re-charge its batteries.

Limited Field of Operation. Limited Field of Operation.

A submarine cannot operate safely at all in the presence of surface boats of the enemy in less than a certain depth of water. The submarine itself, practically independent of its size, whether it is of 300 tons or 1,000 tons, draws about the same amount of water, from the bottom of its keel to the top of the periscope, uskeel to the top of the periscope, us-ually about forty-odd feet—they do not differ more than two or three not differ more than two or three feet—and the consequence is that in the presence of enemy surface boats the submarine must operate in water deep enough to enable it to go down to a considerable distance without striking the bottom; that is, it must have water of from sixty to seventy feet depth. The speed of a submarine under the water is slow-anywhere from eight to ten knots for the aver-

age submarine.

The consequence is that a nava The consequence is that a navar force that commands the surface of the sea can counteract almost entire-ly the attack of submarines, because the submarine cannot go very far un-der the surface. It must do most of its traveling on the surface. It can be seen from a very considerable dis-tance from the high decks of ships, and if it is seen and there are a con-

seen from a very considerable distance from the high decks of ships, and if it is seen and there are a considerable number of surface craft of the enemy in its 'neighborhood it is immediately in very great danger.

For example, a submarine is seen in a certain position at 6 o'clock in the morning, and that information is flashed out on the wireless, giving its latitude and longitude. Then it is known that by 7 o'clock in the morning it cannot be outside a certain circle drawn, we will say, with a radius of eight to ten miles from that point, and at 8 o'clock in the morning it cannot be outside of a certain other larger circle, so that vessels stationed in the neighborhood, that can be called in by wireless, form themselves in a line and sweep across the circle, and that submarine has to proceed under water, for, having been seen, it must immediately go down to avoid the gunfire from the vessel which first sighted it, and must either move under the water or else go down to the bottom and rest there, which it can do only if the water is not over 200 feet deep, with the hope that they will not find it.

"If it travels along under the water with periscope submerged it disturbs the surface of the water, the regular form of the waves on the surface, by passing along underneath the surface, so that you can often see this disturbance proceeding like a wake, and it can from the high bridge of a ship, or from a hydroplane, be particularly well seen. Then two destroyers of the enemy will go across shead of the submarine's 'wake' and throw out a Portland, Ore., May 15 .- Mrs. Ella

GROH WOULD KNOW WANTS OF READERS

Perusers of This Column Are Asked to State Their Preferences as to Topics They Like.

By A. R. GROH.

By A. R. GROH.

Let's have a little heart-to-heart talk today, friends.

I would like to find out which of my articles you like the best.

Now, Smarty, don't say you don't like any of them. That isn't polite and besides it indicates that there's something wrong with your "noodle."

What I want to know, readers dear, is this:

is this:

Do you like those piffle stories where I tell you, for instance, how Mr. and Mrs. Bunker refused to rent their famous hill, but gave it free to their country as a place to fight the battle of Bunker Hill?

Do you like the statistical stories where I inform you how many piles of silver dollars as high as the City National bank building the Liberty loan would make?

loan would make?

Do you like serious municipal in-formation, such as a statement of Omaha's city debt and what cities, if

any, have bigger ones?
Is any one present who likes stories where I talk about myself? I see a few hands. Thank you, friends. Some May Like Poems.
Do you like my answers to readers' questions? Do you care for the poems that I print sometimes?
These questions are important and we will do well to devote today to considering them

we will do well to devote today to considering them.

There are all kinds of people in the world, you know. Some of them like foolishness. Abraham Lincoln was one of these. "A little nonsense now and then is relished by the wisest men." I can be foolish when I try and though it is a great effort, I am willing to try hard and often for your sakes, dear readers.

The Tired Business Man and the Weary Working Girl like a bit of foolishness when they come home in the evening. They don't want to find every day that I have written an article starting like this:

"Omaha manufactures more double-jointed pickles and seedless olives

jointed pickles and seedless olives than any other city in the world."

than any other city in the world."

Some Like a Pickle, Some an Onion.

On the other hand there are those, good people who count that moment lost which doesn't add some usefut information to their fund. They would like that story about the pickles and would clip it out, perhaps, and paste it in their scrap books. But they would turn up their noses at a story starting this way:

"I interviewed Theopholus Artaxerxes Boggs, most worshipful spade

erses Boggs, most worshipful spade holder of the International Order, Sons of Clam Diggers."

Other reads just dote on history, They are strong for articles like

this:
"The first hotel built in Onaha was the Insomnia house, which stood at what is now the corner of Second and Begonia streets. In the fall of 1856—" etc.

now, dear, cherished readers, let me know what you want. And I promise you shall have it. We strive to please. Our motto—"The best is none too good for our readers."

Drop me a line now and tell me what you want written up and how you want it written up.

856-" etc. Now, dear, cherished readers, let

net, and, of course, the submarine cannot know that, as it cannot see, and if it runs into the net, from that

cannot know that, as it cannot see, and if it runs into the net, from that time on its capture is certain, because the net itself is made for the purpose of keeping track of it.

"We did not find out for a long time what those nets are like, and I think it is necessary that it should be understood in order to realize the great danger submarines run in the presence of light surface craft. The net is a very light one made of wire rope, probably not as big as a lead pencil, probably not more than a quarter of an inch in diameter. The meshes of the net are twelve or fifteen feet square. On the top of this net are floats and on the bottom are little weights. The moment this net is in the water in front of the submarine the floats keep the net on the surface and the weights keep the bottom down, and if it runs into it its bow goes into one of the meshes and the net falls back ground it, and it may goes into one of the meshes and the net falls back around it, and it may foul its propeller or may not. The net is 300 or 400 yards long, and, as the submarine proceeds, the floats will trail on the surface, so that even if it dives deeper it leaves these on the surface, its trail is plain and there is no difficulty then in capturing it. It knows when it runs into a net that its capture is practically certain
