Derma ologi t Gives Complexion Secret

The great secret of keeping the face young is to keep off the dead cuticle," says Dr. J. Mortimer Mitchell. "It is well known that the surface skin is constantly dying, falling off in imperceptible particles, except in some diseased conditions, when the same appear like dandruff. But the particles do not all drop off immediately they die, being held for a while by the live skin.

"To have the dermatological surgeon peel off the entire outer skin at one time is a painful and expensive operation. The same result is obtained by applying ordinary mercolized wax, as you would cold cream, allowing this to remain on over night, then taking it off with warm water. One ounce usually suffices. The process is both painless and inexpensive. The wax, which is procurable at your drug store, hastens the natural shedding process. It gradually absorbs the dead and half-dead skin, revealing the new, healthy, youthful-looking skin underneath.—Advertisement.
