# A Safe Oil to Use

An engine with caked carbon on the piston head, fouled spark plugs and unseated valves is like a person with a cold in the head—all stuffed up. Most of this comes from using an oil that doesn't burn up clean.

Polarine burns up clean-reduces carbon to a minimum-makes a smooth running, powerful and economical motor.

Some motor oils pit the cylinders and eat away the valves and piston rings. That's due to acids. There's not a trace of acid in Polarine. It simply cannot eat away the metal and destroy the efficiency of the engine.

Play safe. Use Polarine always. Free from acid, grit and other injurious foreign matter. At our Service Stations or any good garage -wherever you see the sign.
