

WITHIN NINETY DAYS

The Wishes of Every Stockholder of

The Overland Tire and Rubber Co.

Will Be Realized

For many weeks the construction work on the big general rubber factory being built by the Overland Tire and Rubber Company has been rushed with all possible speed.

Today an army of workmen is working overtime putting on the finishing touches in the way of completing the concrete and steel work for the entire first unit, placing the hundreds of steel window frames, installing the most modern heating, lighting, watering, sewerage and sprinkling systems throughout the entire works.

The electric elevators are being installed. Huge vulcanizers to take care of 500 tires per day are being placed; powerful boilers for generating 500 horsepower are being installed in the up-to-date power house. The stack for the power house, which is being constructed of solid concrete and steel and which can be seen for many miles, is nearly completed. It will be 160 feet in height.

THESE MANY ITEMS MUST BE ENTIRELY FINISHED THIS MONTH, to make ready for the installing of the immense machinery equipment for the entire first unit during the month of August. Over six carloads of this machinery have already been received and a dozen or more cars of machinery will quickly follow. Many of these machines are huge in size, requiring solid concrete and steel bases 10x54 feet and 15 feet in thickness.

Already carloads of the finest cotton and rubber have been purchased, with a guaranteed September delivery. This means that the GREATEST HEADWAY IS BEING MADE TOWARD STARTING THE WHEELS OF THIS GREAT FACTORY, as early as possible and without delay.

BEAR IN MIND

THIS IS NOT ONLY A TIRE FACTORY, BUT A GENERAL RUBBER GOODS MANUFACTURING PROPOSITION.

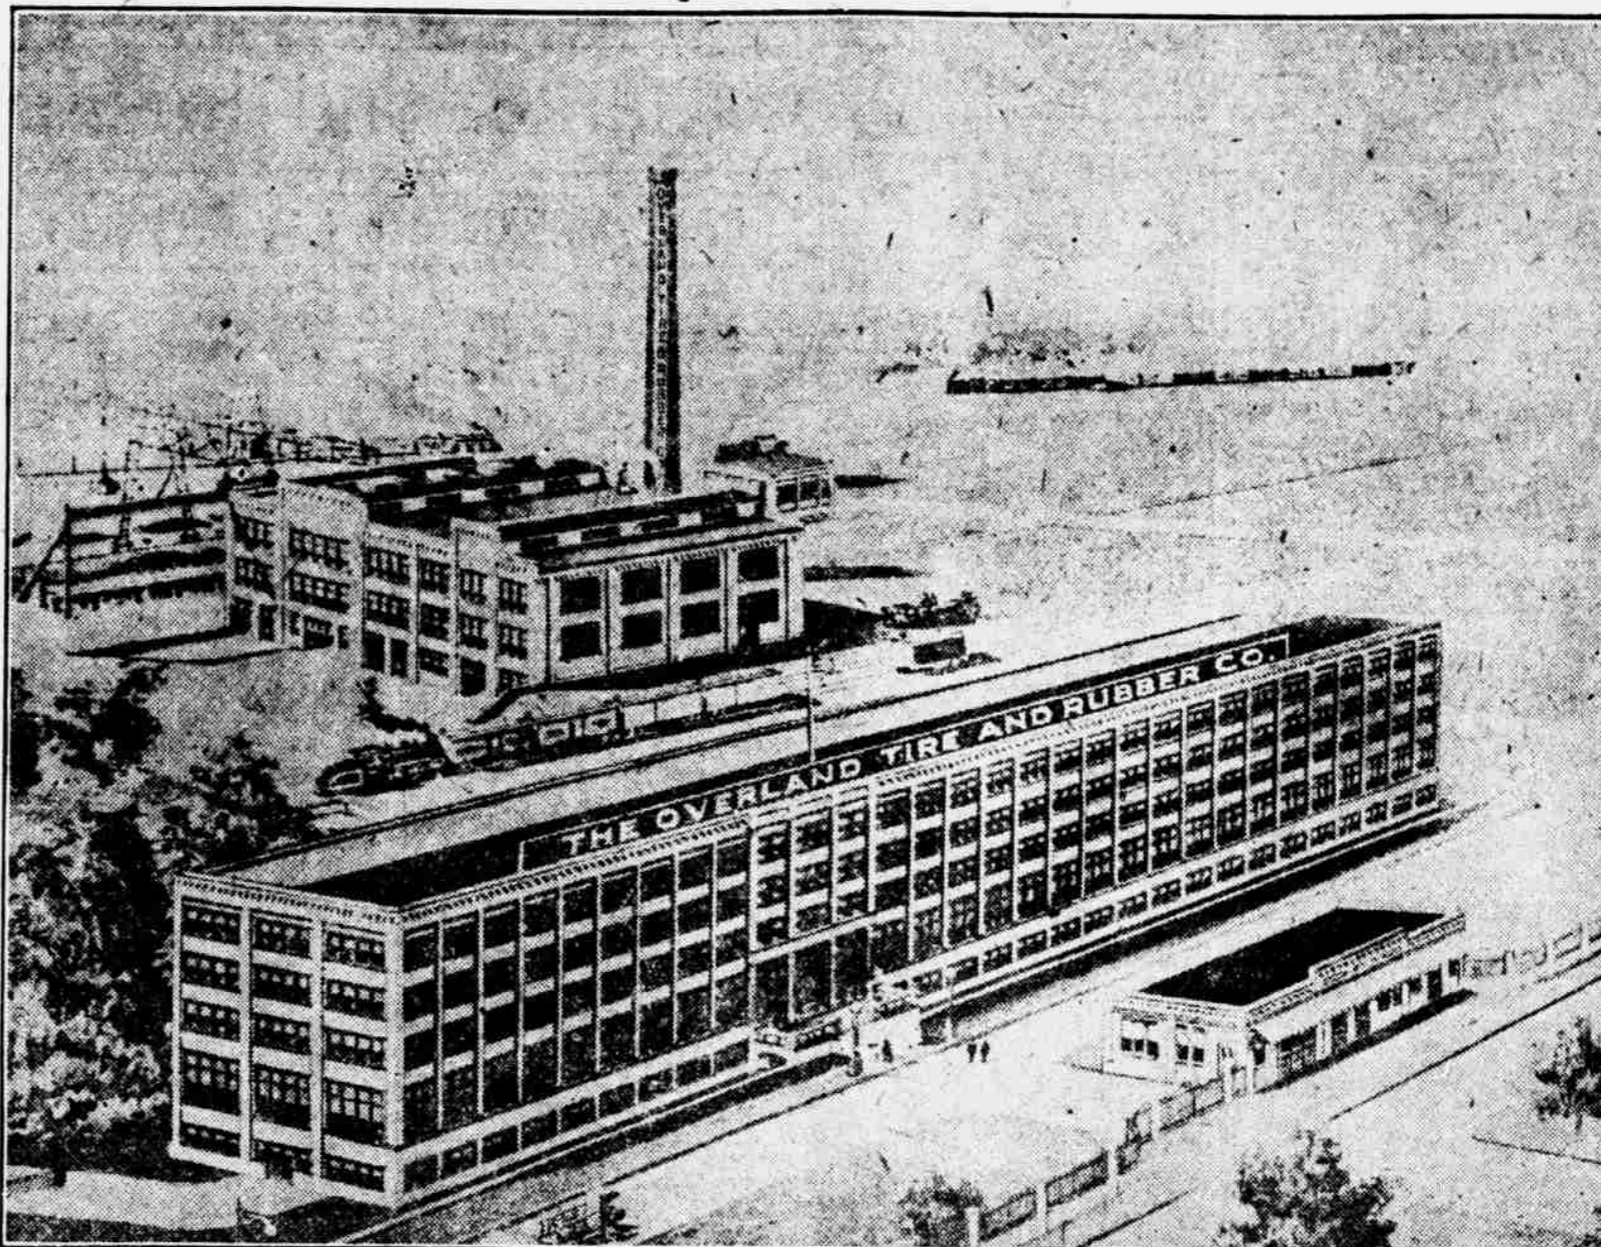

The largest and only one of its kind west of Akron, Ohio. We are going to make tires—all kinds and sizes of them, and also a complete line of all kinds of mechanical rubber goods, such as rubber belting and hose of all descriptions and sizes; rubber soles and heels; a complete line of plumbing supplies, besides all kinds of surgical rubber goods, for which there is an unlimited demand.

Rubber factories of this kind are the ones that have made such wonderful strides in the east and have paid millions of dollars in dividends to the investor.

Note the Difference Between Tire Companies and General Rubber Companies

A salesman for a tire company visits a town. He calls on the tire dealer and then he is through with that town.

A salesman for a general rubber company visits a city or town. He calls on the tire dealer with his line of tires, tubes and accessories; on the hardware man with his belting and hose; on the cobbler with his rubber heels and soles; on the shoe merchant with his rubber shoes and boots; on the dry goods merchant with his rubber raincoats, hats and caps—and, lastly, he calls on the druggist with his full line of surgical rubber goods. In other words, he calls on five or six rubber dealers,

The great general rubber goods factory as it will appear when completed, being built by the Overland Tire and Rubber Co. This immense factory, when completed, will be 75x400 feet, five stories high, giving a floor space of 150,000 square feet. The first unit of this factory will be put in operation during September.

whereas an exclusive tire salesman calls on only one dealer in each town, for the very reason that there is only one agent to deal with. For example: A tire agent gets orders for hundreds of dollars, while a general rubber agent gets orders amounting to thousands of dollars.

INVESTORS

If you are looking for a place to invest your money where it has ample opportunity to double and perhaps triple itself within the next three to five years, don't pass up this proposition.

Remember, that W. R. BLOWERS, who has designed and is building this general rubber factory, is the same man who designed and built the Dunlop Tire and Rubber Goods Factory of Canada in 1906. Each investment of \$500 in that factory after just two years of operation became worth over \$25,000. It is worth over \$50,000 today.

Small investors, had you invested \$100 in the Dunlop proposition it would have put you on Easy Street. \$500 would have made you wealthy. You had no chance on that proposition, as it was too far away, but NOW

Mr. Blowers Comes To Omaha

with the same kind of a proposition that was offered to and accepted by the people of Canada in 1906, and it is his sole ambition to duplicate that record here in Omaha as nearly as possible. He claims the opportunity is greater in Omaha today than it was in 1906 in Canada, as the demand for tires, tubes and all general rubber goods has increased a thousand-fold, and yet

We Claim the Tire and Rubber Industry Is In Its Infancy

Within the next three years every farmer and business man who can rake up enough money to make the payment is going to own a truck.

\$3,000,000 Bonds Voted

On the 24th of June Douglas county voted \$3,000,000 of road bonds. What does it mean? It means that three public highways will be paved across the entire county. Every county in Nebraska and Iowa is going to follow the same program. Within the next three to five years millions upon millions of dollars are going to be thrown into good road making. What will this mean? It will mean that the small cars are going to be replaced by larger and faster cars. It will mean that where there is one truck hauling cattle, hogs and articles of all descriptions today there will be fifty within three to five years—and we wish to see them all provided with good Overland rubber tires.

Do you comprehend these figures and conditions? If so, you will want to get in on this proposition.

The stock of this company is all common, issued fully paid, non-assessable and transferable. Every investor in this company will be treated alike and you get the full earning power on your dollar.

Nearly 3,000 Men and Women Have Already Subscribed for This Stock

The price of the stock advanced May 1, 1919, from \$10 per share to \$12.50 per share. The amount to go at the \$12.50 price is strictly limited. Judging by the amount the investors are subscribing for this stock, less than 300 investors will get in at the \$12.50 price. The next block will go at \$15 per share. DON'T HESITATE. ORDER TODAY.

SPECIAL INDUCEMENT

In order to accommodate the small investors and all those who haven't the ready cash to purchase the number of shares they would like to handle at the \$12.50 price, we are going to offer you this opportunity to invest on a payment plan, giving you six months to handle your investment.

To take advantage of this opportunity, follow the instructions. From the table below select the number of shares you wish to purchase and send check, draft or money order, payable to the Overland Tire and Rubber Company, for the cash payment. This will reserve the number of shares you have selected. We will then immediately mail you a note for the balance due in six months, without interest, which you may sign and return to us, and as soon as the note is received your order will be given prompt attention and a receipt mailed to you. These notes are non-negotiable and are not sold, but held by us until such a time as you can take care of them. Before the note becomes due the factory will be in operation and the stock that has cost you \$12.50 will be worth at least \$20 per share.

The Advice of 3,000 Stockholders To You Is

To handle every share you possibly can while you can get in on this payment plan and \$12.50 price.

REMEMBER, the next block goes at \$15 per share, and by October 1, 1919, \$20 per share is our prediction.

| | |
|---|------------|
| \$ 50 cash and \$ 50 in 6 months will buy | 8 shares |
| \$ 100 cash and \$ 100 in 6 months will buy | 16 shares |
| \$ 200 cash and \$ 200 in 6 months will buy | 32 shares |
| \$ 250 cash and \$ 250 in 6 months will buy | 40 shares |
| \$ 300 cash and \$ 300 in 6 months will buy | 48 shares |
| \$ 500 cash and \$ 500 in 6 months will buy | 80 shares |
| \$1,000 cash and \$1,000 in 6 months will buy | 160 shares |

One of the five immense rooms this great factory will have when completed, each 75x300 feet. Note the heavy concrete construction; the steel window frames; the gigantic columns; also the large rooms that lead off to the left and right. All columns and side walls are built amply strong to take care of the next three stories.
