

Milk Spell

Nearly twenty-eight million cans of milk to fill one 1920 contract, is the latest development in the business of The Waterloo Creamery Company.

The Waterloo Creamery Company will supply one New York contract with 575 cars, 575,760 cases, or 27,636,480 cans of milk next year.

This order is the largest ever received by The Waterloo Creamery Company, and added to the already large business of the concern means much for the future development of the milk industry in this section. When it is considered that the average train consists of 40 loaded cars, it will be seen that it will take 15 solidly packed freight trains to deliver the Omaha product on this one order.

Waterloo Creamery Co. Administration Building, Omaha, Nebraska—This building contains the General Offices controlling our twelve plants.

Data Regarding One 1920 Milk Contract

Total number of cases contracted each month—47,980. 575,760 cases contracted per year.

Cans put end to end would reach 8,060,640 feet or 1,526 miles, or more than the distance from Omaha to New York City.

Will take 47,212,320 pounds or 5,554,400 gallons of milk as it comes from the cow.

Would take one cow 4,388 years, or the milk produced by 1,180,308 cows for one day to furnish enough milk to fill this contract.

Will take 27,636,480 cans for containers.

Will take 520 miles of wire for strapping cases.

575 carloads.

These are some of the plants of the Waterloo Creamery Company which will be used to fill the contract ever made by one concern in Nebraska. They are models of sanitary completeness. From the selection of the best Nebraska cows, to the finished product, each step in the formation of the food is under the watchful eye and complete preparation. The company is known nationally as a guardianship of the public health.
