of honest and efficient public service. Inculcation of Americanism as the true basis of good citizenship.

How about saving daylight these days?

At any rate, the coal scarcity has not dimin-

Another snowfall might have been dispensed

ished the joy of passing the buck. If Mr. Wilson ever expects to change his

mind. Mexico is a good place to start. The coal miners have put more steel work

ers "on the street" than the strike did. Coldwater got the first car of state-mined

coal in Kansas. The floor is now tendered you. A prize of \$100,000 is offered for an airplane that will rise vertically. What has become of

the Edison helicopter? A big Chicago hotel has reduced its rates

almost to prewar figures. No sign of this becoming contagious, however. Ashurst of Arizona will be on the bad list at

the White House soon if he does not cease criticism of the Mexican policy.

is District Attorney Slack who represents the United States in the case against the miners?

Mine owners do not want "inexperienced" ticular in days gone by when recruiting strike-

Toledo rides again on trolley cars, paying the 6-cent fare that was so scornfully rejected on election day. Experience still teaches a dear school.

Omaha retailers are wrestling with a mighty stiff problem, that of doing a day's business in five or six hours, but the determination with which they have taken hold is encouraging.

Herr von Ludendorff says Germany will not interfere with the senate in the matter of the peace treaty, explaining: "No people with pride and self-respect endures willingly a meddling or mixing in its affairs by foreigners." He knows this to be a fact now, but it took a very complete licking to make him understand it.

One sugar investigation after another has brought out the same state of facts, and the same helplessness on part of the government for dealing with profiteers. The attorney general thunders in prospect as to what he is going to do after January 1, but the biggest question is what the sugar barons are going to do.

"Patsy" Havey will be sorely missed from the police force, of which he has been not only an active but an honorable member for so many years. It is not especially a credit to public service that a man who has given such faith and zeal to his work and has so creditably discharged all his duties should in the end be required to turn to private employment that he may receive his worth in wages. Sergeant Havey's record is one that the department may point to with pride, and from which younger men may draw inspiration.

Bars On American Ships?

If the shipping board's only reason for in-stalling bars for the sale of liquor on its new transatlantic passenger fleet is a thrifty desire to promote travel and revenue, its action is directly in conflict with the prohibition program berately adopted by congress and the states that ratified the 18th amendment.

When prohibition was decreed, federal revenues amounting in 1918 to \$443,839,544 were sacrificed. Other millions derived by states and municipalities from like sources are going the same way year after year. A careful estimate of property destroyed or adversely affected places the total in excess of \$1,000,000,000.

In competition with foreign liners under whose flag it is not a crime to sell a bottle of beer or wine, the shipping board fears that while they are catering to standing-room only its palatial but cheerless ships are likley to be running empty or with only a few austere teetotallers in their cabins. But is not this the new national policy, and when it was pro-claimed did anybody reckon or care about the

We must commend to the old salts of the shipping board the stern philosophy of the antisaloon league, which takes no account of the grosser things of life but finds its most satistying rewards in denying to others the comforts to which they have been accustomed. Steamships that cannot be operated at a profit on this plan will naturally be condemned as dissolute and immoral, and fit subjects for the junkman or the bankruptcy court.-New York World.

SETTLE THE COAL STRIKE.

If our optimistic, altruistic, international administration at Washington will only bestir itself and do something to settle the coal strike, it may make one credit mark on an otherwise blank sheet.

Sending miners to jail for contempt of court will not get coal out of the ground. Silly talk of "conscripting" men for work does not lead anywhere. The impasse was precipitated by the meddling of Dr. Garfield with a situation that was in a fair way to right itself. Operators had offered 20 per cent increase, and the men were demanding 31. The head of the fuel administration, by a process peculiarly his own, arrived at the conclusion that 14 per cent was enough, and so announced.

The result is the most remarkable industrial condition ever known in America. Officials at Washington are devoting themselves to the allocation of such supplies of coal as are available, not entirely with the utmost success at that. Locally representatives of the fuel control are doing their utmost to spread the rapidly dwindling stores of fuel over the needs of the community, which is patiently submitting to the restrictions ordered, and looking ahead to better days.

Several schemes for settling the strike, short of government operation of the mines, have been suggested. Each of these contains the idea of satisfying the miners to the extent that they will voluntarily resume work. None of them come from anybody connected with the government, as Washington seems to have lain down completely. As the paralyzing effects of the fuel shortage extend from one workshop or factory to another, increasing the misery and suffering of the citizens, cabinet officers "optimistically" hope that something will turn up and end the trouble.

Would it not be a good plan to have John Lewis, William Green and a few others of the officers now held under bail ordered to report at Washington, there to meet a like number of coal operators, and arrange for a settlement? Contempt proceedings and investigations could be taken up later. What is now wanted in the United States is coal.

America and the Anarchists.

Standing at Ellis Island, from whence they are getting their farewell view of the Statue of Liberty, Emma Goldman and Alexander Berkman turn to the law they have long flouted. Into the courts they have denounced and defied this pair of professional anarchists dive for shelter. Not as seekers for justice, or suppliants for mercy, but to test the final technicality on which they hope against hope they may be permitted to longer enjoy the liberty afforded by

Why does the government seek to oust this pair? Is the course in keeping with the theory of liberty that is guaranteed to all citizens? Does there come a time when the safety of our institutions requires repression of opinion or the beliefs of any?

Sober consideration can lead only to an affirmative answer to these questions. Emma Goldman and Alexander Berkman for a generation have preached the destruction of all government, and because of their deliberate and persistent refusal to be bound by the laws to which the mass of the people submit, have finally reached a point where expulsion from In the matter of names, did you note that it the country is the only reasonable way to deal with them.

Americans do not lay a heavy yoke on any. Restraints on individual conduct are not special in application. The widest possible latitude conmen in their mines. They were not so par- sistent with general good is allowed to all, and nowhere has the individual been given such unrestricted exercise of his powers and been so carefully and continually safeguarded in his rights as here. A large part of all our difficulties has come from the fact that aliens have failed to appreciate the responsibilities that go

These privileges do not include incitement to riot, to the throwing of bombs, the assassination of public officials, or many of the other joys of free and happy Russia. That is why Emma Goldman and Aleck Berkman are finally going back to mingle with the multitude under the

"A Police Court Case."

Referring to the Jenkins episode as a "police court case," the New York World expresses the hope that if war comes with Mexico, it will be for a better cause. Ordinarily, the treatment accorded Consul Jenkins would be sufficient. He is an American citizen, and an officer of the State department of the government. Raided by bandits, he was forced to open a safe, from which not only his own money but a considerable sum of American funds was taken. Then he was held prisoner until a ransom of \$150,000 was paid his captors. On his return to headquarters he was arrested by the Carranzista authorities, accused of aiding the Diaz rebels, and thrown into the penitentary at Puebla.

"A police court case," perhaps, but it looks much like an indignity that should not be borne. It is so viewed by the secretary of state and certain of the United States senators. If it were not enough, though, a considerable list of other outrages might be enumerated. Not the least among them may be recalled the ransom paid for the release of two officers of the United States army, who were unfortunate enough to fall into the hands of Mexicans, while we might cite the murder of two others, and in general the record of relations between the two countries since the Wilson administration com-

We do not seek war with Mexico, but, just as it was with Germany, a condition worse than war is rapidly being established. Something must be done to end the foolishness, and it should have nothing of the nature of the Vera Cruz expedition or the "pursuit" of Villa.

Kipling asks reverence and respect for the battle fields of France. This request should not be necessary, but already some visitors have acted as if these places were pleasure grounds. If such would only take thought as to what happened on those fields, the cause for censure soon would vanish. Kipling is right when he says the ground is holy.

Congressman Good of Iowa says estimates submitted from the departments will be cut by more than a billion dollars. He will not hurt the feelings of the taxpayers if he makes good on this promise.

A French rag picker has accumulated a large fortune by speculating in American army supplies, but he hasn't much on a great many Americans in that respect.

Bituminous Coal Profits

From the New York Times.

Secretary Glass is usually so correct in his figures that it is a surprise to find him apparently, on the authority of others, stating the profits of the bituminous coal industry for the year 1917 at a figure which exceeds the gross earnings. There may have been companies that made profits of 100 per cent, or even more, but there can be no argument from a few individual companies to the regulation of the industry as a whole. His response to the statement of the National Coal association will be interesting in a controversial sense, but the wage dispute must be settled on present condiions, not those of previous years. Secretary McAdoo made similar statements, which are even more open to criticism. The report which he made to the senate in 1918 covered several

hundred cases, but included less than a score in which the net before taxes was 1,000 per cent. The total capitalization of these cases was less than \$200,000 in a billion-dollar industry. these companies had investments larger than that when he grew up he was going this was the farthest from her their capital stock, and paid taxes not hinted at in Secretary McAdoo's statement of their income. The Wall Street Journal has analyzed these reports with results characterized by Secretary McAdoo's adjectives, "shocking and indetensible. One \$2,500 company earned 1,689 per cent, ac-

cording to the allegation, but in fact, after de-duction of taxes, earned 46 per cent on its investment. A \$20,000 company earned 2,134 per cent before taxes, but its earnings on investment were 26 per cent. The grossest case of all, showing earnings of 225 per cent on investment, was a \$5,000 company, with investment of \$15,356, net of \$84,944, and taxes \$50,436. That left for the extortioners \$34,508, or less for the shareholders than for the tax collectors. The largest of these profiteers had invested capital of only \$140,000. It is obvious that conclusions based on the showing of these small concerns would be very far out of the way if applied to the industry as a whole.

Too much of the antagonism between labor and capital is due to a suspicion about profits. The campaign in favor of nationalization of various industries, and against exploitation of labor, rests upon nothing stronger than the Mexican notion that labor earns more than it paid, and that labor would receive more profits were abolished. If profits are abolished, wages will go with them. Dollars will not work for nothing any more than men, and the hope of profit is the lure of capital to employ work-Probably there are more cases in which capital is underpaid than labor, for the commercial mortality is higher than any battle statistics. The cases in which labor does not get its wages are as unsuitable to argue from in these matters as the figures given above. They prove nothing as to the whole industry, what ever they may prove in the given cases. When capital escapes insolvency, after having paid all wages which the labor employed by it demanded, it is lain in wait for by radical agitators who allege that capital and profit are robbery, although there would have been no work or wages without the capital risked. If this seems a parody of a frame of mind impossible for rational men it will suffice to quote the resolution adopted by the British labor party on Saturday declaring that "the only effective way to end profiteering was to end the capitalist system of production for profit, and advocating the nationalization of all means of production and the encouragement of municipal trading." Nothing can be thought trivial which gives encouragement to the supporters of such

"White Slaves of America"

A correspondent asks: "If 400,000 men must go to jail or dig coal against their will, isn't it time for some of our statesmen to write a volume on 'The White Slaves of America?

man-jack of the alleged 400,000 is free to stop ter.

His term of office will soon be work if he pleases without agreement or con-spiracy with anybody else. Only conspiring to ended and then, if he should not be ally covered with a thin coat of lessen coal production and freeze the country reappointed, he will be ready to go out is contempt of court.

Nevertheless, the question suggests some same work, or to go into the service interesting contrasts. Cobden's volume was di- of the state or federal government rected against real oppression. It struck at the in employment of young children in the coal mines, health conditions, or he may set up the harnessing them to coal cars, the impossibly himself as a consulting sanitary enlong hours, the demoralizing conditions of their slavery. It was a powerful book. In a sense it may be said to have stirred England as the United States was stirred by "Uncle Tom's Cabin." It hastened the reform of the evils it criticised.

There was no piano in any miner's house in all Great Britain. There was no union of miners. The coal barons were the bread lords, and paid what they chose to pay. The employment of children and women meant the destruction of the home; it was a crime against the rising generation. Nobody talked then of a six-hour day. Fourteen was the common limit. Cobden's title was justified, and got additional ironical force from the existence of negro slavery in the United States, strongly attacked by some of the men who owned coal mines.

We are glad no young children are forced to work in our mines. We are glad that miners have a much shorter day. We are not unwilling to concede that unions have had a large part in producing the change. But today in America the essential slavery is that imposed upon the consumer, the ultimate consumer of coal; the essential tyranny is the class tyranny of the miners' unions. One is tempted to suggest as an analogue the comparison between czar tyranny, which was bad enough, and soviet tyr-

anny, which is very much worse, in Russia. The community's interests demand the use of every agency of government to increase pro-duction of fuel. What is being done has the sympathy and support of the best people in every state. That it will prove efficient is the hope of America.—Brooklyn Eagle.
