# **New IDEAL-Arcola Radiator-Boiler**

The IDEAL-Arcola is one of the world's newest and greatest of inventions. It is unique-being both a

Boiler and a Radiator. Takes the place of a parlor stove, and distributes heat to the rooms, and through its water-jacket conveys the excess heat to connecting AMERICAN Radiators stationed in adjoining rooms. There is no coal-waste! Unlike stoves and hot-air furnaces, the IDEAL-Arcola with its water-backed surfaces does not burn out or rust out-it will easily outwear the building in which it is placed.

## Heats the most and costs least!

The Arcola and the AMERICAN Radiators are made in sections or units and can be increased or decreased in size (Note that 65° of all buildings are altered in size.) Legs cannot be kicked out, as with stoves-hence no fire-risk to building. Does not overheat-hence no danger to children. The soft, radiant, healthful, cleanly warmth changes a house into a home.

The Arcola may be painted or enameled in any shade or color to match woodwork or decorations. It is not obtrusive like a stove but may be painted to harmonize with any furnishings.

## Shipped complete ready to operate

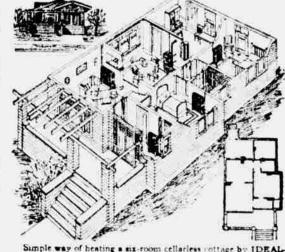

The beauty of the IDEAL-Arcola method is that no cellar is needed. Everything is on one floor. If there are two or more tenants in the building, each can have his own Arcola and make the temperature to suit his own needs-can make his own climate! If you do not wish at first to heat the entire building, buy a small size IDEAL-Arcola and one or two radiators (at prices lower than herein given) and later on buy extra sections for the IDEAL-Arcola and two or three more radiators to warm more rooms. Investigate at once this greatest value in building equipment.

Catalog showing open views of houses, individual flats, stores, offices, etc., with the IDEALArcola Boiler in position will be mailed (free). Write today
