

# THE NEW DIXIE FLYER MODELS

*New--Unique--Beautiful--Sturdy--Powerful*

BUILT TO SERVE ALL PURPOSES

**T**O successfully build an All-Purpose car requires a practical knowledge of the demands that are likely to be made upon it in any season under any conditions, anywhere. It requires further the ingenuity of experienced engineers and the hand of the skilled artificer to produce such qualities as will enable the car to adapt itself most readily to varying conditions and requirements.

Upon these principles the Dixie Flyer has been designed; upon this foundation it has been built, with the result that it is truly an All-Purpose car in practice as well as in name.

Honest, sturdy, dependable from the word go, the Dixie Flyer has everywhere won the hearts of men and women who realize that more than superficial garnishings are required to create a thoroughly satisfactory car.

And yet, in addition to the more important considerations of utility, power, efficiency and dependability, the Dixie has distinctive beauty, substantial poise and a wealth of refinements and comfort.

Dixie standards of design, construction and equipment are constantly carried out in every type—Touring, Roadster, Sedan and Coupe.

### Recent Body and Mechanical Changes in the New Models:

**Body Improvements:**

- Bevel edge body.
- More room in rear compartment.
- Gypsy curtains.
- Larger plateglass in rear curtains.
- Improved windshield—six inches slope.

- Inside and outside door handles.
- Gasoline gauge in center of tank—separate filler cap.
- Lift-the-dot curtain fasteners.
- Top lowered in front.
- Linoleum on running boards.

- Deeper rear seats.
- Double padding of seats, with heavier springs.

**Mechanical Improvements:**

- ¾ to 1 nickel steel spiral gears.

- Generator with increased charging rate at lower driving speed.
- No 2 cutout.
- Accelerator placed near floor board between pedals, with foot rest.
- Longer gear shift levers.
- Concealed hinges in hood.
