GROUND SYSTEM IMPORTANT IN RADIO PLANTS

Amateurs Likely to Overlook This Feature-Care Will Increase Outfit's Sending Radius Greatly.

By JOHN GILMORE O'ROURKE. Superintendent American Radio Relay League, District of Eastern Nebraska.

After erection of the antenna comes the ground system. The aver- while traveling anywhere from 100 age beginner invariably looks upon the ground system as a rather minor detail and is generally satisfied with attaching the ground connection to a ground rod or water pipe. How-ever, the ground system is every bit as important if not more so, than the antenna. At least 60 per cent of the amateur stations today would double their transmitting range and considerably increase their receiving range if more precautions were taken when sinstalling the ground

Sizes of Ground Leads. In the first place the ground lead should be as short as possible. Best results are obtained with ground leads not exceeding 10 feet in length.

By ground lead I mean the lead jamas of blue and rose and presented tunning from the secondary of the lead them to her friends at a reception. oscillation transformer or the an-tenna inductance to the ground or began making their appearance in point of ground connection. It is restaurants around the opera. also imperative that this lead be as large as possible if long distance transmission is the aim of the buildtransmission is the aim of the builder. For the smaller type sets up to and including one-fourth kilowatt power input, two or three No. 12 copper wires twisted into the form of a cable will be sufficient. A cable composed of 10 or 12 copper wires of the above mentioned size will form an efficient ground lead for

stations having a transformer power input of one-half kilowatt. At least 15 No. 12 copper wires should be used for stations employing one kilowatt of power as measured across the primary terminals of the high potential transformer. Copper tubing forms an excellent ground lead. One-half or five-eighth inch tubing should be used for the onekilowatt transmitter. Connections for Ground Leads.

successfully installing a ground system is the connection of the ground lead to mother earth. Too much cannot be said on this subject. First, connect the end of the lead to a red preferably copper or brass. This rod should be placed so that the ground lead will be vertical if possible. It should be from eight to 10 feet in length. If possible, bury part of next winter's supply of coke in a hole and place the ground rod in the center. A few old copperin the center. A few old copper-bottomed wash boilers placed in the hole with the ground rod and topped off with a couple of sacks of salt will help out immensely. Now run ground rod to eyerything in sight. Chicken wire fencing laid directly under the antenna and soldered to the main rod will help the system admirably. Copper, brass or zinc plates buried and connected to the wires or cables from this system also increase the efficiency. Copper wires or cables buried radially from the rod will further increase the efficiency. Last but not least add in the water and gas pipes. Con-nect to them from the street side of the meter. Of course, if the antenna and

ground system is to be used only for receiving, the large ground lead will not be required.

ing radio communication.

Address all questions, care of Radio Department, Omaha Daily

T. H., Omaha, Neb.—1. I am 14 years of age. Is it possible for me to secure an amateur license?

A.—Yes.
2. Does it cost anything?

D. B. (near Douglas, Wyo.)—1. Are two stages of audio frequency amplification practical?

A.—Yes.

2. I have two bulbs, an audiotron and a Marconi V T. Which bulb is best for use as an amplifier?
A.—The Marconi tube.

French Aces Engage In Varied Pursuits;

enemy planes during the war, 12 remain in the French army, seven are Advertisement. engaged in commercial pursuits, four have returned to college, one is a nissionary and the others are scat-tered on farms or in factories.

Captain Fonck, leading ace of the allied armies, with 75 planes to his credit, is a member of the French chamber of deputies and also directs a business dealing specially with automobiles and aeroplane motors. Lieutenant Nungesser, who shot down 41 German planes or balloons, is in business. Sous-Lieutenant Bourjade, with 26 victories bis credit, is doing missionary Fork among the natives of the Sunda islands. Sous-Lieutenant Nogues was killed in a foot ball game. Sous-Lieutenant Herbelin is engaged in newspaper work at Nancy.

\$75,000 Paid for Four

Of Kitchener's Bottles New York, May 15.—M. Parish Watson, art dealer of this city, confirmed a report from London that he had acquired the two famous pairs of "chrysanthemum bottles" given to the late Lord Kitchen-

er's heir, for \$75,000. The bottles, Mr. Watson said, were purchased recently. He said that he intended to add them to his own collection and denied that he had acted as an agent in the transaction.

Four Mewing Mascots Of Aerial Squad Born 5,000 Feet Above Sea

Nogales, Ariz., May 15-At least four "members" of the Twelfth Acro squardron will have a diffi-cult time pointing out their "old home places" to their progeny in the years to come. The four are the latest additions to the Twelfth, which has just moved here for sta-tion from El Paso.

When the squadron moved out of El Paso it became a question of what to do with the mascots, a pair of cats. They were finally stowed away in one of the planes. Upon arriving here after the long flight, there were six cats. The four newcomers were born about 5,000 feet over the arid lands of Arizona to 125 miles an hour.
