By HENRI DUVERNOIS (Noted French Novelist.) Special to Universal Service. Paris, June 19 .- Men and women's culinary tastes are incompatible. Women have an unnatural fondness for lobsters and highly seasoned 0 dishes, for strange salads and indigestible deserts. The moral of all this is that women and men in order to live in better understanding should study each other's taste and cater to it. Man should not stuff himself with heavy foods, women should peck at spicy entrees.

Bataille, Dramatist, Makes Hit as Painter; Spurns Rich 'Models'

By Universal Service. Paris, June 19.—Henry Bataille, the famous dramatist, has proved himself one of the most accomplished portrait painters of the day. His pictures exhibited at the Salon des Artistes Francais are daily surrounded by a large crowd of visitors, liams, had locked him in a room while society women and actresses are vying with each other to pose for He had difficulty in inducing Raphael to reveal his name because, him.

But Henry Bataille so far has remained obdurate. He has limited his efforts to glorifying the features of Mile. Yvenne de Bray, the star of several of his plays, among them the 'Animator," which is now running in Paris, and to men and women of letters, among them Colette, better known as Colette Willy, and Tris-tan Bernard. The ordinary actress and society woman have no chance whatever of being immortalized by the author.

Henry Bataille was an art student when he took to writing in order to make money. He tried his hand at the drama, and the success of the Child of Love," "Maman Colobri," case. the "Wedding March," led him to

abandon the palette. Last spring he exhibited a picture of Mlle. Yvonne de Bray as a "Study

in Pink," and this aroused so much comment that the author now devotes all his spare time to art. Bataille also is noted as a poet.

Hunch--If Attacked by Snakes, Whistle; They'll Shake Selves to Death

Portland, Ore., Jane 19.-The shimmie is fast becouting the popular indoor sport of cockroaches: This fact was divulged at Reed college recently, when Dr. Helen Clark, head of the Reed psychology department, described the effect of dance music upon the lower or-

ganisms. Miss Clark says soft, tuneful music will send a healthy cockroach into an emotional trance

which finds expression in a rhythmic dance. High strains produce an ecstatic response which has every semblance of the shimmie. Similar results have been ob-

served in the angle worm, which has wriggled and shivered in perfect cadence with a popular dance step. Experiments, carried on by a Reed junior student, showed similar response in a captive mouse, which danced a "fox trot" to a tune whistled in its ear.
