The Commoner. In what years was he a can-

didate for president of the U. S.? 1896, 1900 and 1908, Winner: Helen Dickson. 2211 Miami st., Omaha, Neb.

# Do Flying-Fish Fly?

(Copyright, 1920, by the Wheeler Syn-dicate, Inc.)

Travelers who, for the first time, invade the waters of the tropics, are often amazed at what appear to be flocks of tiny birds which rise from the water, skim along its surface for several hundred set and then disappear under the waves. Closer investiga-tion, however, discloses the fact that these winged creatures are not birds, but fish-members of the herring family and therefore related to the shad, the swordfish, the mullets, the trout and the ccd.

The ability to rise from the water and travel rapidly through the air is due to a pronounced development of the breast-fins which, in addition to giving the

impetus necessary to enthe fish to leap upwards act s a sort of parachute which supports it in the air. When alarmed by the approach of a boat or of some larger fish which is recognized as an enemy, the "flying herring" darts rapidly to the surface of the water and leaps upward at an oblique angle, pushin; the water aside with its fins in ...uch the same manner that a man would push the earth with his feet in jumping upw. d. The instant they clear the water, their well-developed fins serve a purpose analagous to the planes of an air-ship and they skim along, close to the surface, sometimes traveling as much as 500 feet before diving again,

You will want the Colton Pipeless Furnace in your new house because it obviates the necessity for special construction of any kind and does not require openings in walls or floors, cutting the house to pieces before it is completed. You will demand it because it assures you 100% heat from each ton of coal and every room, nook and corner will be warm even in the coldest weather next winter.

The Colton Pipeless Heating System is the logical one for old homes. It modernizes them in a day. Requiring no more space than a vegetable cellar, it relieves the owner of useless expense in alterations and the housewife of the torn-up condition incident to the installation of the oldstyle heating plant.

The noticeable fact that furnace manufacturers are either changing to the pipeless furnace or adding it to their, line, illustrates the increasing demand for this new and better system. Over 5,000 comfortable owners in Iowa prove the quality of the Colton-the pioneer pipeless furnace in this territory.

Many special features contribute to Colton superiority. The lower section of the fire pot is slotted on the inside so that air is delivered to the fuel around the edges as well as in the center through the grates. Consequently, a hot fire is maintained clear to the rim of the fire pot-no ashes are allowed to accumulate at the edges and insulate the bowl-better heat is obtained by using all instead of but part of the fire pot.

Extra heavy casings are used and full length inner casings which reach clear to the register. increasing the radiation surface and at the same time aiding circulation.

The base is cast in one piece-the grate bars are heavy triangular sections, geared in pairs. The combustion chamber is corrugated to allow for expansion and contraction. Radiation surfaces are increased by straight-sided, fluted walls. The Colton Pipeless is self-cleaning.

Cheaper in first cost-more efficient -guaranteed to save a third of the fuel required by stoves or pipe furnaces, the Colton Pipeless Furnace is the modern heating plant. Make sure of getting a Colton for your home-order now at present prices.
