

ONLY 2 U. S. MEN HAVE INCOMES OF \$3,000,000

Treasury Figures, Show 28 Who Derive \$2,000,000 Yearly, While 13 Exceed \$1,000,000 Annually.

Washington, Aug. 14.—Two men in the United States confess to having incomes "in excess of \$3,000,000 a year, according to information obtained at the Treasury department today.

Twenty-eight admitted having incomes of \$2,000,000 "up," while 13 others say that their incomes are between a million and a half and two millions.

Of those whose incomes exceeds \$500,000, 6,064, about one-third of the total number, are residents of New York state and half claim New York City as their home.

New York Has Most.
The 28 richest taxpayers are not evenly distributed. About one-half of them live in New York. Two, resident in Baltimore, are said to have found the manufacture of munitions exceedingly profitable; one lives in Michigan, one in Ohio, two in Pennsylvania and one in Rhode Island and one in Texas.

Of the total who gave their incomes at \$50,000 or more last year only a small proportion are really in the millionaire class, their earnings in many cases representing swollen wartime profits, or the proceeds from large undertakings.

Millionaires Cautious.
On the other hand, internal revenue officials point out that many millionaires stick to conservative investment, bearing small returns, and that their incomes did not exceed \$50,000.

There are 1,271 in the \$50,000 to \$60,000 income class, 901 in the \$60,000 to \$70,000 class, 658 who have \$70,000 per year to \$80,000, 472 who have \$80,000 to \$90,000, 374 who have \$90,000 to \$100,000, 1,084 who have \$100,000 to \$150,000, 476 who have \$150,000 to \$200,000, 263 who have \$200,000 to \$250,000, 131 who have \$250,000 to \$300,000, 134 who have \$300,000 to \$400,000, 74 who have \$400,000 to \$500,000 and 40 who have \$500,000 to \$1,500,000 incomes.

Printers Prepare to Wage Fight to Secure Shorter Working Hours

Albany, N. Y., Aug. 14.—An unsuccessful attempt to bring the issue of the New York printers' "vacation" last fall upon the floor of the annual International Typographical Union convention marked the closing hours of the convention last night.

Leon House, president of New York Typographical Union No. 6, however, advised a meeting of printers on the subject in another hall following the adjournment of the convention.

In the closing hours the convention ratified the 44-hour negotiations of the executive council and the United Typothetae of America at Chicago, whereby it was agreed all publishers under the jurisdiction of the Typothetae and all printers under the jurisdiction of the International Typographical union enter negotiations to establish the 44-hour week without decreases in wages.

The old age pension limit was reduced to 60 years and a guarantee made of a pension of \$8 a week to all printers reaching that age after 20 years of continuous service. The convention opposed granting cards to disabled veterans trained in government printing schools.

State Department Receives Japan's Reply To Occupation Note

Washington, Aug. 14.—Japan's reply to the American note protesting against Japanese occupation of the northern part of the island of Saghalien was received today at the State department.

The note was described as a lengthy one and it was understood that it went thoroughly into the whole question of the Japanese policy in Siberia. The document, together with the original American note, may be made public next week.

Omaha Storage Company Adding to Floor Space

Within 60 days Omaha will have the largest cold storage plant west of Chicago. Five stories, with a floor space of 150,000 feet, are being added to the plant of the Omaha Cold Storage company at Eighth and Farnam streets, P. C. Hyson, manager of the warehouse, states that the 11-story building will have a greater capacity than any in Minneapolis, Kansas City or St. Louis.

The People's Ice and Cold Storage company is also making improvements in its plant at Thirteenth and Chicago streets that will cost \$100,000.

Flames 300 Feet High Leap From Burning Gas Well

Bakersfield, Cal., Aug. 14.—A column of flame 300 feet high leaping from across Standard Oil company gas well in the Elk hills, 30 miles southwest, was visible here early today. The well is in the vicinity of that which burst several days last August with a loss of approximately 500,000 cubic feet of gas.

Clearing House Reports Show Gain in Reserves
New York, Aug. 14.—The actual condition of clearing house banks and trust companies for the week shows that they hold \$18,575,730 reserve in excess of legal requirements. This is an increase of \$3,404,610 from last week.

Consume Much Cotton

Washington, Aug. 14.—Cotton consumed during July amounted to 525,405 bales of lint and 37,763 bales of linters, the census bureau announced today.

Doctors Would Starve if Breen's Rule Was Followed

Attorney Keeps in Touch By Taking Daily Jaunt In Park.

The early morning outer need not be alarmed if he should meet a tall man in Hanscom park about six bells a. m., wearing overalls, old shoes and without head covering.

Introducing John Paul Breen taking his morning walk in the park, listening to the twitter of the birds and getting himself in condition for the day's work.

Mr. Breen, a well-known member of the local bar association, has not found it necessary to remain at home one day during the last 40 years on account of illness.

His daily regimen is to rise about 6 o'clock, don an old pair of shoes and overalls and then walk forth to the park, where he walks briskly up and down the hillsides for 30 to 45 minutes. He then jumps into his bath and later eats breakfast.

Men Should Exercise.
"Every man who reaches middle life should take regular exercise and thus minimize the possibility of a breakdown," said Mr. Breen. "I have lived near Hanscom park for nearly 20 years and nearly every morning, except in severe cold weather, I go out for a morning walk. This exercise stimulates the circulation and otherwise aids the proper functioning of the body. It gives zest for breakfast. It is wrong to eat breakfast within a few minutes after arising or before taking exercise or a bath. I have dumbbells and other apparatus at home for use when it is not convenient to go to the park."

He said he was not boasting about the fact that he has not taken a whole day off in 40 years on account of disability. The only illness he has suffered in two score years was an attack of hay fever. Headaches and other aches are almost unknown to him.

"Early to Rise."
"I have been following this system for years and I know just what it will do for a fellow if he keeps it up," he added. "Aside from the physical benefits of these morning jaunts, one gets in close touch with outdoor life. Did you ever hear the birds sing when the sun is peeping over the eastern horizon? Did your nostrils ever dilate to the fragrance of the woods in the dawning of the day? If you lie in bed until 7 o'clock and then rush to the breakfast table and then to the street car, you don't know you are living."

Planting of Trees Is Necessary for Future Prosperity of State

Plains of Nebraska, Swept for Ages by Forest Fires, Became Almost Barren of Timber and Early Settlers Were Wasteful—Better Legislation Needed.

By T. W. McCULLOUGH.
Nebraska has no waste lands. This is the conclusion of Dr. George E. Condra, director of the Nebraska Conservation and Soil Survey, in his report for 1920. Every acre of Nebraska soil is capable of producing something of valuable service to man, but every acre of the state's great area is not employed as it properly might be, nor is the way in which it is best adapted.

Nebraska is popularly referred to as a treeless state, by which is meant that it has none of the great forests that characterize other regions. Several reasons may be ascribed for this situation, the most generally advanced, and perhaps most tenable is that fires periodically swept the great prairies of Nebraska, burning off the grasses and with them the young shoots that might have developed into splendid woods.

Fires Before Man's Time.
These fires were started before man's time in some of the many ways in which they now originate; spontaneous combustion, resulting from fermentation of decayed vegetation, a bolt of lightning striking in the right spot, or any one of a number of other causes, but the effect was always the same; the open spaces were swept clean by the flames and sprouts and saplings went with the lesser growth.

So, while the regions to the east of the Missouri saw endless forests spring up after the glacial ice had melted, the plateau to the west, rising in its graceful sweep from the river to the Rockies, was left so bare as to deserve the name of treeless.

Here and there along the water courses grew a thin fringe of cottonwood, box elder, or some other varieties of timber, but the broad stretches between were barren of trees.

Early Settlers Wasteful.
Early settlers found in these clumps or groves wood for their uses and made havoc among the limited patches. Their present needs were more imperative than anything the future held, and they were not, even at the best, conservationists.

Many creeks and minor water-courses were completely denuded of the slight timber that lined their banks, and the growth that gave the "Pine Ridge" its name went swiftly down as settlers cut the pines and cedars for log buildings, fences and firewood.

Today the traveler through Nebraska might get an idea that the state had once been forested, so numerous are the farm groves. These are all of recent origin, however, the remnants of the original timber.

Arbor Day Means Much.
Arbor Day means something to Nebraskaans, and the beautiful groves that surround all the older farm homes, the "wind breaks" and wood lots, are all proofs of how zealous the admonition of the far-seeing sage of Arbor lodge has been heeded.

It is worthy of note here, however, that the so-called "timber culture" law, under which many a claim was filed and many a quarter section passed from public to private ownership, produced little if any lasting or serviceable effect in the way of actually inducing timber culture.

Nebraska's soil will grow trees. It also grows crops more immediately profitable and of larger demand and wider service to the world. Some portions of the state, though, will not produce wheat or corn, or even grasses in advantageous quantity under existing conditions. Expert opinion has proved that these wild and unattractive lands will grow trees. Quoting from Dr. Condra's report:

Pines in Many Places.
"Pines occur at a number of places in the western part of the state. Growing among the pines are red cedars and a few junipers. Most pines occur in the Pine Ridge, Wildcat Ridge, North Platte and Lodge Pole areas, occupying about 500 square miles. The trees are at their best on Pine Ridge, being 12 to 24 inches in diameter and 40 feet or more high. The trees are quite free from disease and the timber is of good quality.

"Pines are also found in good stands along the Niobrara, as in Schlegle canyon south of Valentine, north of Ainsworth and in Long Pine canyon. The broad leaf species of the east and the pines and cedars from the west meet along the Niobrara.

Experiments Successful.
"The federal government has experimented with tree-planting in Nebraska and shown conclusively that certain species can be grown on the sandhills of Nebraska. Many ranchmen, profiting by this experience, have beautified their places and grown large windbreaks for protection. The Reserve now has several hundred acres of very good pine forest, which can be seen from Burlington trains as they pass through the Middle Loup valley above Halscy.

"The utilization of forests is a problem in Nebraska. There occur mixed stands and there is no definite market for their products. The people do not understand the use of the axe and the saw. Fire wood has little demand, because coal is used generally. Lumber comes from other states, and it will not be possible to produce lumber in Nebraska in competition with large lumber districts and their methods of distribution.

JOHN PAUL BREEN

mands of the army. France sacrificed many acres in excess of its normal cutting in both public and private timberland. Governments there are taking immediate steps to replace the trees. Germany had long conserved its timber, and had even imported from Russia, Poland and other neighboring lands when an actual excess of home-grown trees was available. Governments prudently ahead to the day when its neighbors' supply would be exhausted.

Government Plans Replacement.
In the United States, the government is negotiating with owners of great timber tracts, studying methods by which the forest may be preserved by replacing used timber with new growth. This has been proven practical in Europe, and other countries, and as far as it has been tried in the United States it has been successful.

We have no intention of going into detail on this at the moment. The great areas of the sand hills in Nebraska, at present idle, may be made to bring forth pine timber. Uses will be found for the trees when they are grown. Should the lumber be not available, the improvement of the soil, by reason of the humus created, will justify the forestation of this region.

Extension of the grazing grounds from which will come the beef herds of the future is an incentive. Many uses for the small trees suggest themselves. A jack pine in the sand hills will produce a fence post in 10 years. Nebraska has and will have considerable use for fence posts. The lumber here produced can be used for making boxes, berry and fruit baskets and crates, butter tubs, egg cases and slack barrel cooperage stock. Thousands of carloads of this material is used in this state, all shipped in from abroad.

Conservation Possible.
One of the sights noted from a car window down about the middle of the "Maryland peninsula" was a saw mill alongside a canning factory in a small pine forest, where fruit and berry boxes were being turned out and going almost straight from the saw to the factory, where they were being filled and sent to market. That is real conservation, and is not an altogether impossible picture for Nebraska.

This topic is not new. C. F. Harrison of York proposed it to the people of the state, and especially to the legislature. The Bee printed a number of articles from Mr. Harrison, giving the result of his extensive experiments and observations. His suggestions were supported by the editor of The Bee. The federal government has shown us that Harrison was right. If his advice had been taken when first given, the state would now be getting the benefit of a huge growth of pine and other proper timber in the sand hills. It is not too late to start. Time will be required, for it takes years to grow a crop of trees.

If the legislature will consider this question and set about the work of gradual afforestation of the bare lands in northwestern Nebraska, working along a definite and comprehensive plan, it will be doing a real service to the citizens of the future. Those now here who happen to be left in 1940 or 1950 will rise up and call blessed the men who made possible the advantages of a real pine woods region where now only sandy wastes and scant vegetation exist.

COAST-TO-COAST PLANE ARRIVES AT TUCSON, ARIZ.

Forced Landing at Departure Causes Broken Propeller—Flight Resumed Saturday

Tucson, Ariz., Aug. 14.—One of the all-metal airplanes which recently completed a transcontinental trip over the northern route arrived here at noon Friday on its way from Los Angeles to New York. In hopping off for El Paso Friday afternoon it was forced to land in a patch of mesquite bushes near the city and a broken propeller forced the machine to remain here overnight.

The flight will be resumed today, Pilot E. E. Allyn of Cleveland announced. Eddie Rickenbacker, famous American ace, and John M. Larsen of New York were passengers.

Allyn made a spectacular descent of several hundred feet when high temperature is believed to have stopped the motor. The propeller was twisted off in the mesquite.

Longshoremen to Resume Work If Request Granted
New York, Aug. 14.—Coastwise longshoremen, who have been on strike here since March 12, voted at a mass meeting Friday night to go back to work Monday morning, providing the steamship owners get rid of the strikebreakers they have employed.

They agreed to submit their demands, including a wage increase of 15 cents an hour, to arbitration after they return to work. A committee of the strikers will wait on the steamship owners Saturday and report back to a special meeting of the longshoremen Sunday.

Don't Forget Pyramid
If you used this famous treatment for the relief of itching, bleeding or protruding piles or hemorrhoids, pass the word along to others who may be suffering.

Almost every druggist in the U. S. or Canada carries Pyramid Pile Treatment in stock at 60 cents a box. Don't accept substitutes.

\$250 Wins \$50,000

25,650 Barrel Gusher Not Far From Our Property

That great Gusher of the Texas Company, in the Gulf Coast District is right now, according to reports issued August 7, 1920, producing a daily average of 25,650 Barrels. This is the largest present flowing well in America. It made and paid \$875,000.00 in eleven days. Our great High Island property positively should produce from 25,000 up to 75,000 barrels per day. Why not? Location means everything. Learn the facts.

You are reading these ads every day. Why sit idly by and let this exceptional deal slip through your fingers? Spend a postage stamp. Get our Gulf Coast Bulletin. Know the truth. Your neighbors are buying, we want your order. Have you a hundred or two and not much more. Keep it and you will always have not much more. Don't let anyone advise you to keep your little money, while they are using their money buying our Leases and have the chance of making a fortune. Your little money will get away from you some time in some way. Take my advice. Fool the Jinx that has been following you all your life.

Make your money work like a Banker and business man. Win with the Winners. Your Banker is making a profit on your money in his Bank. Get it out and into Oil Leases that give you a man's chance to win in a big way. The world calls a man who has little money and afraid to use it a boob and a mollycoddle, and laughs at him. The wise man lives in good homes, rides in automobiles, while the man afraid to take a chance walks, always dodging the fellow in the automobile. One lives in fine homes, the other fellow lives on the back street in poor neighborhoods, almost in poverty. His family suffers all because he is not man enough to take a chance. That wife and children deserve better things. What is \$250.00 in a life's chance? Answer me that. Play it on a Lease with us at High Island, Texas, as hundreds of Nebraska people are doing. We ask you to do it now before these Leases advance in price, which they are going to do very soon. Use your red-blooded brain power, wake up, come out of that rut, change your affairs, give yourself and family a chance. Make yourself the equal of any man. To do this you must make a lot of money. We offer you that chance for a very small amount of money.

We have salesmen in Omaha and in nearly every Town in this State. Have him tell you all about our plans for making your fortune. You don't have to buy unless you want to. It costs nothing to have him explain. Write for our bulletin, or have a salesman explain. How can you pass judgment on any proposition when you don't do a man's part and look into the wonderful merit of our deal? A five-acre Oil lease today costs only \$250.00, a chance to make \$50,000.00. Make us prove this to you, and we can do it. Think of that 25,650-barrel well in the Gulf Coast District. Don't you want to know about big things—or what? Why marvel at the ability of other men when you have greater ability within yourself? Make your money work, get into the activities of life. These Leases are going over the top into big money. Go over the top with us to a fortune.

we have worked long and hard in our time, but forced ourselves into big money because we took a man's chance. We are appealing to you to better your conditions and make a fortune, and we know that you are with us. Personally we think our Leases are immediately over a great volcano of oil. We will drill our well at High Island as a thorough test, and fully expect to develop a great gusher. This should make your 5-acre Lease sell quickly up to \$50,000.00. We are oil operators and know that this is the best offer you ever had.

Man—can't you understand that we are doing a big man's part and trying to help you. We need your help also. We don't want the millionaires—they never made us a dollar. It is men of moderate means that we are talking to in a personal way in this advertisement, and in our bulletin, and by letter. We want you as our friend, join with us in this great chance. Let us make you a fortune. We would like to talk to you personally at our office, face to face, man to man. We feel certain you would put your money in with us. Shoot \$250.00 for once in your life with men who cannot afford to lose. We believe it will make your fortune. Your Lease holds good for years without operating it and without rental and no taxes. Just \$250.00 purchase price is necessary.

Read our ads in both The Omaha Bee and the Daily News, send for our bulletin, send us your check for \$250.00. We will select your Lease personally. Address all communications and mark them Attention Sales Department, Gulf Coast Development & Refining Co. and make all moneys payable to the Company.

Thanking you for giving this matter your deep consideration. Remember our prediction: These Leases are going over the top into big money.

Most respectfully submitted,
Gulf Coast Development & Refining Co.,
740 First National Bank Bldg.,
Omaha, Neb.

Long-distance phone, Tyler 398.
Don't fail to read our ads in The Bee and News—every day something different
