Typhoid Fever Insurance

There is typhoid fever in Omaha. Not an epidemic, but enough to cause concern. No one wants typhoid fever to enter their home. Milk is one of the most common carriers of this disease. You can absolutely insure yourself against getting it through milk by pasteurization.

Pasteurization Kills Typhoid

Pasteurization, a long word with a simple meaning, kills bacteria which may have found their way into this food product which is the emblem of purity. Furthermore, pasteurization does not change the quality of the milk in any way, shape or form, contrary to what the enemies of this modern health measure would like to lead you to believe.

What Is Raw Milk?

Raw milk is milk delivered to you just as it comes from the cow. No precaution has been taken to kill the bacteria which might have entered the milk between the time it left the cow and before it reached you. Dust, flies, dirty utensils and even the milker himself may be a typhoid carrier.

What Is Pasteurization?

Pasteurized milk is milk as it comes from the cow without anything added to it or anything detracted. It differs only from raw milk in the following respect: Pasteurized milk is heated to 145 degrees Fahrenheit and held at this temperature for 30 minutes and then immediately cooled to 40 degrees Fahrenheit, bottled at this temperature and delivered to you safe from all harmful bacteria. It is not boiled. Boiled milk toughens the curd and is hard to digest. Bacteria incubate and thrive from 70 degrees to 120 degrees. They are killed at high temperature and can't grow at low temperature.

Authorities

Following authorities either advocate, recommend or insist on pasteurized milk: U. S. Army and Navy; National Child Health Organization; all Agricultural Colleges; most all leading city health commissioners, including our own; Professor M. J. Rosenau, Harvard University; Nathan Straus, the great philanthropist; Professor E. V. McCullen, Johns Hopkins University, and Miss Lutie Stearns.

Best Authority—Common Sense

Every father and mother knows that heat is the best way to make food safe. No one in this age would think of going back to the cannibal way of eating. Every father and mother also knows that keeping food cold means preserving it. As this is a definition of pasteurization in every-day American talk, why hesitate in adopting it?

Pasteurized Milk Can't Cure

When typhoid fever once enters a home and the doctor is called he immediately orders the family to either boil their milk or get pasteurized milk. He does this to avoid any further typhoid entering the home. This is too late to make your change. Of course it is more sensational to repair results than to prevent the cause, but it is more expensive in both heartaches and dollars.

You Can't Afford to Take Chances

The difference in price between Alamito milk and the ordinary milk will only amount to a few cents a day, and no father or mother who will give this milk question the proper consideration will endanger the lives of their dear ones by taking chances on bringing disease into the home through milk when it can be prevented. Buy MILK INSURANCE or Pasteurized Milk. Turn over a leaf in the history of your home today—BUY ALAMITO MILK.
