

WESTCOTT

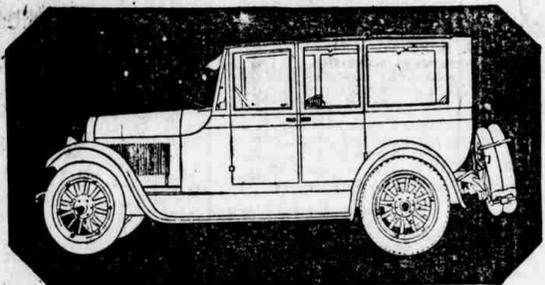

The Car with a Longer Life

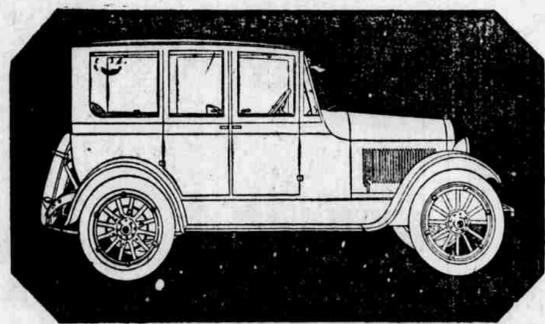

Type C-48—Seven Passenger Touring

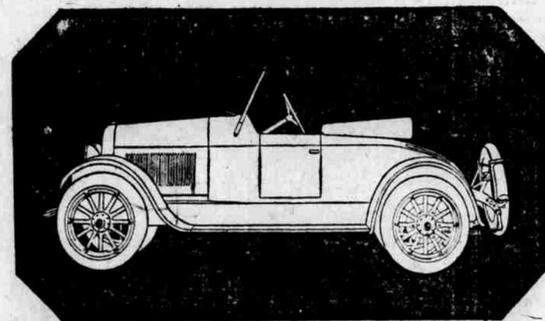

Type C-38—Five Passenger Touring

Type C-48—Seven Passenger Sedan

Type C-38—Five Passenger Sedan

Type C-38—Two Passenger Roadster

THE WESTCOTT first attracts attention because of its *distinctiveness*. It is distinctive in both *action* and *looks*. The novel "belt line" effect, with its fascinating two-tone painting plan, is different from anything you have seen and at the same time is in good taste and not in any sense freakish.

When it comes to mechanical excellence, Westcott again stands out. Those who study its construction will find enough in the Westcott specifications to be profoundly impressive. Yet everyone knows that specifications by no means tell the whole story. The real question is—*Has the Westcott made good?* Must the buyer gamble entirely on his own judgment, or has the car a record of *past performance* that would entitle it to respect?

In the many-year evolution of the Westcott—while each successive model has been better than the last one—there are no apologies to be made for any of the older cars. A comparison of the Westcott today with the Westcotts of previous years will show in each case a selection of parts that proved wise, an engineering judgment that proved sound. Time has more than justified every car that Westcott has built.

After all, that is the best assurance you could have that the Westcott you buy will perform for you—and keep on performing through a long and trouble-free life.
