

Capit Strides in Dairy Industry

Nebraska Now Ranks Fourth In Butter Production; Progress in Last Two Years Is Cited by Dairyman.

Lincoln, Neb., Nov. 19.—More progress has been made in the dairy industry in Nebraska during the past two years than during any 10 years period previously, according to J. E. Palm, secretary of the Nebraska Dairyman's association. Although the state still ranks comparatively low in the milk producing states, it is fourth in butter production. "This has been brought about," Mr. Palm says, "by the breeding of better stock, dairymen and farmers realizing that by raising pure bred animals their butter production will be increased."

In their efforts to put the state among the leaders agriculturally, farmers have been neglecting the

State Adapted for Dairying. Nebraska, he says, is admirably adapted to the dairy industry. "Few states have greater possibilities in dairying than Nebraska," he says. To substantiate this statement, Mr. Palm calls attention to the fact that during last year the state produced more than 3,000,000 tons of alfalfa. "Some states that are ahead of Nebraska in the dairy industry produce very little alfalfa and are forced to have this feed shipped in," he said.

Government statistics for last year show that the state had 27,783 milk cows, an increase of more than 6,000 over the preceding year. This year, Mr. Palm says, the increase will be even greater.

The Nebraska Dairyman's association has been conducting an educational campaign to promote the uses of milk and milk products. Another campaign among dairymen and farmers is being conducted by the association to induce them to kill off the non-producing milk cows and replace them with pure bred stock. Every effort is being made to replace the scrub cow with better grades. "Pure bred cows," Mr. Palm says, "will produce from 20 to 40 pounds of butter fat weekly, while grade cows will produce less than 10 pounds."

Mr. Palm says the growing of

scrub cows is a losing business for the farmers of the state. "While the careless farmer continues to lose money by keeping scrub cows, the progressive farmer is reaping the benefits by improving his stock," he says.

The executive committee of the dairyman's association will meet here next month to decide upon a legislative program to be followed during the coming session. Some action may be taken, it is said, to induce the legislature to make a more liberal allowance to farmers who are forced to kill their cows because of tuberculosis. Dairymen are allowed but \$50 for grade cows killed and \$100 for pure bred.

Columbus Light Company Asks Increase in Rates

Columbus, Neb., Nov. 19.—(Special)—The Columbus Light, Heat and Power company has made application to the city council for permission to raise rates approximately 20 per cent.

Recently the council granted the gas company a substantial raise through ordinance, and now the light company is before them with a transcript of their business for three years, in which they show a steadily increasing deficit.

The light company is owned by Omaha parties and the gas company is a local concern.

Midland College Is to Build \$100,000 Home For Theological School

Fremont, Neb., Nov. 19.—(Special)—Dr. E. E. Stauffer, president of Midland college, announced that the Lutheran church has decided to erect a building costing \$100,000 as a new home for the Western Theological seminary, a part of Midland college.

The board of trustees of the college have \$75,000 in subscriptions and through the efforts of the Fremont Commercial club citizens of this city subscribed the remaining \$25,000.

The new seminary is to be built on Military avenue, a short distance from the college. Military avenue is the finest residential street in the city and the addition of such a building as proposed will add to its beauty and dignity.

The Western Theological seminary celebrated its twenty-fifth anniversary this week, and the decision to enlarge and build a new home on the proposed scale is a fitting commemoration to its twenty-fifth birthday.

Shaving soap invented in England is packed in wooden bowls to save the use of cups, the bowls being thrown away when emptied.

Daughter of First Norwegian Methodist Dies in Fremont Home

Fremont, Neb., Nov. 19.—(Special)—Mrs. L. C. Meberg, 64, a Norwegian by birth and whose father held the first Methodist services in that country in his small thatched-roofed house, died at her home here after an illness of seven years. Mrs. Meberg had the distinction of being present and taking part in the first Methodist church services ever held in Norway, at her father's little frame house, nestling in the hills of Norway. She came to this country in 1881, when she was married. She leaves, besides her husband, two daughters, both wives of Fremont high school professors.

Curling Hair This Way Preserves Its Beauty

That dull, dead appearance of the hair no longer troubles the woman who has adopted the scientific method of keeping her tresses in curl. The result is very different from that produced by the drying, devastating waving iron. The hair appears more naturally wavy and curly, and the application is really beneficial to the life and growth of the hair.

Any druggist, of course, can supply the liquid salerine. A small quantity should be put on just before doing up the hair, using for the purpose a clean tooth brush, drawing this down the full length of the hair from root to tip. The effect is delightfully surprising, and there is no discoloration, no stickiness, greasiness, nor any other unpleasant accompaniment. The hair is quite manageable, no matter how it is fashioned.
