GET OUT OF THE SMALL PAY CLASS STUDY ACCOUNTANCY.

Take the Short Cut to a High-Smiaried Position.

Why waste your time in a position where salary and advancement are limited, when there are so many splendid opportunities in the accounting line. Positions paying from \$2,000 to \$6,000 per year are constantly going begging for want of competent men. Never was the demand for men with the right knowledge of accounting as great as at the present time. There is nothing to prevent you from qualifying for one of these high-salaried positions. It is simply a matter of determination and application and a few hours' study at home each week during your spare time under the supervision of our large staff of certified public accountants. No previous knowledge of accounting is necessary. We not only give you the training to hold a good position, but we are constantly receiving requests to furnish capable men. With such training and facilities as we have for assisting you there is no excuse whatever for you remaining in a rut.

List of Shareholders in Large est Company of Kind in U. S. Shows Artisans Own Majority of Capital.

By HOLLAND.

On the day which followed the meeting of the stockholders of the United States Steel corporation a list of some of the stockholders whose holdings are large was published. It was a short list and although it did reveal the fact that there were a few men of wealth among whose posses-sions are large blocks of the United States Steel company's stocks, it did, on the other hand, by inference at least, make it clear that the public, including the skilled artisans who are employed by this corporation, are the owners of much the greater part of the capital stock of this corpora-

A former Omaha girl, Miss Irene A year or two before his death, Abram S. Hewitt ventured the pre-Berry is the daughter of Mrs. Anna diction that within a generation's time almost all of the stock of this corporation will be in the hands of investors. Mr. Hewitt furthermore said it was no longer possible to assert that the capital stock of this corporation was to a great extent water. For if there was water in it in the beginning, that had been squeezed out and it was completely squeezed out at the time of the quotation for this stock was as low as

\$9 a share. For Board of Education Junior Jacobson, a student of the

Mr. Hewitt, who was one of the ablest authorities in the United States upon the iron and steel indus-try, predicted that within a few years this corporation would in its output represent substantially one-half of the entire output of the American iron and steel industry. He told the iron and steel manufacturers of Great Britain at the annual meeting of their association that the United States would in a few years take away the prestige Great Britain had so long enjoyed as the leader in the iron and steel industry in the world. Mr. Hewitt lived long enough to know that the prediction which he made and which his English hearers were disposed to laugh at was justified.

ability if the properties are to be well managed.

The depositors in the sanvings banks of the United States, the policy holders in the insurance companies, the stockholders in the bank are indirectly at least the owners of much the larger part of the stock and bonds which represent American industrial life. It is however, only recently that the great public is beginning to understand that demagogues and cunning politicians seeking popular favor cannot attack our great industries, alleging that they represent enormous capital in the possession of a few men, without sooner or later endangering these industries and therefore doing harm to the great public which is really the owner of our industries and of the transportation systems.

All sorts of expedients are suggested for relieving the so-called building situation. But the fact is that the public as a whole is new carrying on a tacit, unorganized and voluntary strike, so to call it, because the public and the builders cannot afford to pay the prices which are exacted for building construction. It has been demonstrated that labor is the immediate recipient of a large percentage of the amount which is spent in building operations and the wages which are insisted upon by the unions whose members, bricklayers, carpenters, painters and others are so high as to cause the chief obstacle in the resumption of building construction.

Of course, some construction work of Labor and Building.

This art work would cost the Board of Education a considerable sum if done by a draughtsman, disposed to laugh at was justified.

The principal points made by Mr. Hewitt scen after the organization of the United States Steel corporation was the certainty that the ownership of this property would be in possession of the public. He was confident that in time the skilled artisans who worked for the corporation would become a group conspicuous among the steckholders. He thought that this would be a valueable object leason for it would be a valueable object leason for it would seach politicians and damagogues as well as the people that the capital of the United States which is represented by the stock and bonds of industries is really in the hands of the people.

Who Are Capitalists.

Recently it has become evident that the public is beginning to realize the fact that it is not a few men who are the possessors of great wealth who are in the trussense of the word the capitalists of the United States, but it is the common people. The reports made by the Penneylvania, the Union Pacific, the Southern Railroad company and other railroads show that it is the public who are the owners of these properties. It is true that the public makes choice of those who are to direct these properties realizing that it is necessary that there be concentrated action and a high degree of ability if the properties are to be well managed. Of course, some construction work of
this kind is inevitable. There appears to
be less trouble in the south in the field
of building activity than in many parts
of the north. It is not only high wages
which the building unions demand which
is causing the dendlock to be placed upon
constructive building, but it is the reduced
efficiency. For instance, bricklayers,
