### The New Hork Cimes. By ALEXANDER DANA NOYES.

Omnha Bee Leased Wire. New York, Feb. 15 .- The increased strength and activity on the stock exchange today was ascribed to a variety of causes. One was the plain evidence of easier money, for the first

time since the slight tightening of rates in the third week of January. That the partial redistribution of reserves and credits from the east to the west and south during the three or four ensuing weeks has been mostly completed, was indicated in the last weekly statements of the interfor reserve banks, whose ratio of reserve had increased even in the banks which lately were under heaviest pressure, to percentages as high as 50 and 69. Such transfer of funds s not unusual for this time of year; its completion leaves the money market subject only to the general in-fluences of trade. If the drift of money rates is to be further downward during the present season we shall presently see more definite

Thus far the fall in New York's call meany rates to the 4 per cent level, with 35 outside the stock exchange the reduction from 5 per cent to 44 per cent in the Cleveland reserve hank's official rate, and reports from London of an easier discount market and a possible coming chance in the Bank of England rate are the preliminary indications.

Aside from money rates, today's stock marked was favorably influenced by the stability of foreign exchange after Tuesday's abrust recovery, by the further notable recovery in prices of wheat, com and cotion, and by a growing conviction that the critical moment of the "homes raid" on the treasury was past During all this extraordinary enimeds, financial markets have had the feeling that they were in the presence of an unknown force; the avaved indifference of the full's congressional promoters to the state of public financies seemed to portend a kind of legislative recklessness whose scope nobody could measure. Belief that the undertaking might be stooped and the agilstion of it thereby defored until after the November elections was therefore bound to influence the financial sentiment.

Today's advances in the stock market were irregular, but there were many gains of 1 to 3 points. Railway stocks had no part in the advance, however, and professional handwork was visible again in various industrial shares. Great activity with the usual irregularity in the course of prices was displayed in the market for investment bonds.
