Amateurs Should Inspect "Lead-In"

Expert Tells How to Steer Clear of Common Mistakes in Aerial.

When you have found that your aerial is 100 per cent perfect, it is well to inspect your "lead-in" wire, an expert on radio states. The "lead-in" is the wire which runs from the aerial to the receiving set. The first trouble point is where the "lead-in" joins the aerial. It should join it either at one end or at the middle of the aerial. When a single wire is used, the most efficient plan is to use the aerial and "lead-in" wire all one piece.
